DIKSHA INGOLE

Senior DevOps Engineer | Cloud & Infrastructure | CI/CD & Automation | Docker & Kubernetes | Azure & AWS
+91 93256 25384 | dikshaingole5@gmail.com | Pune, India | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

DevOps Engineer with **4+ years** of experience building and running **cloud infrastructure** on **Azure and AWS** and automated **CI/CD pipelines** (Jenkins, Azure DevOps, GitHub Actions). Hands-on with **Terraform**, **Docker** and **Kubernetes (AKS/EKS)** for large, transaction-heavy microservices in production, with deep **production support** and troubleshooting experience. Builds **risk and controls** into delivery: security scanning, least-privilege access and secrets management. Works across the **SDLC** in **Agile** teams with development, QA and product, and picks up new tools and domains quickly.

KEY SKILLS

- **Cloud & Infrastructure:** Microsoft Azure, AWS; VPC/VNet, load balancers, DNS, Ingress, TCP/IP
- **CI/CD & Automation:** Jenkins, Azure DevOps Pipelines (YAML build & release), GitHub Actions, Git-based workflows; pipeline stages for build, automated test, security scan and deploy
- **Infrastructure as Code:** Terraform (modules, remote state, workspaces), AWS CloudFormation, Ansible
- **Containers & Orchestration:** Docker, Kubernetes (AKS & EKS), Helm, ArgoCD (GitOps), microservices deployment patterns
- **Security, Risk & Controls:** DevSecOps vulnerability scanning in CI/CD, IAM/RBAC, Azure AD (Entra ID), Key Vault, AWS Secrets Manager, NSGs, least-privilege access, manual approval gates for infrastructure and production changes
- **Monitoring & Observability:** Prometheus, Grafana, Azure Monitor, Log Analytics, CloudWatch
- **Scripting & Linux/Unix:** Bash and shell scripting (GitHub Copilot-assisted scripting and pipeline authoring), Ubuntu administration, package management, process monitoring
- **SDLC & Ways of Working:** Agile/Scrum, full software development lifecycle, incident resolution within TAT/SLA, root cause analysis, escalation handling, runbooks and SOPs
- **Domain Exposure:** large-scale, transaction-heavy backend and microservices systems (food ordering & delivery platform, learning management platform)

WORK EXPERIENCE

Senior System Engineer (DevOps) | Infosys Limited | Pune, India | Jul 2022 – Present

Project 1: Food Ordering & Delivery Platform (Azure): large-scale, transaction-processing backend

Environment: Azure | Azure DevOps | AKS | Docker | ACR | App Service | Functions | API Management | Terraform | Ansible | GitHub Actions | Prometheus | Azure Monitor

- Designed, implemented and maintained **CI/CD pipelines** in **Azure DevOps** (YAML build and release) and **GitHub Actions**, working with development and QA teams across the SDLC to deliver fast, reliable release cycles.
- Deployed and scaled containerized **microservices** on **Docker** and **Azure Kubernetes Service (AKS)** in production under high order and transaction volume, managing cluster upgrades, node pools, workload scaling, Ingress Controllers, Services, ConfigMaps, Secrets and Persistent Volumes.
- Built, stored and versioned container images in **Azure Container Registry (ACR)** as part of the automated deployment pipeline.
- **Simplified** environment setup by replacing manual configuration with **Terraform** and **Ansible** automation, making infrastructure changes repeatable, reviewable and consistent across environments.
- Strengthened **security controls** through DevSecOps practices: Azure IAM, Entra ID, **RBAC**, **Key Vault** secrets management and **NSGs** to protect applications and sensitive data.
- Ensured high availability and reliability using **Azure Monitor**, Log Analytics, **Prometheus**, alerts and dashboards, improving mean time to resolution.
- Troubleshot complex production issues and performed **root cause analysis (RCA)** on critical and repeat incidents within TAT/SLA, documenting permanent fixes to reduce recurrence.
- Authored runbooks and standard operating procedures that support **knowledge sharing** and smooth onboarding across the team.

Project 2: Learning Management Platform (AWS): large-scale backend system

Environment: AWS | Jenkins | GitHub Actions | Terraform | CloudFormation | Docker | Kubernetes (EKS) | ArgoCD | Helm | Linux | Bash | Prometheus | Grafana | CloudWatch

- Built and ran **Jenkins** and **GitHub Actions** pipelines with build, automated test, **security scan** and deployment stages to support complex production releases.
- Ran production **Amazon EKS** clusters, packaging and releasing containerized workloads with **Helm** charts and managing Ingress, Services, ConfigMaps and Secrets.
- Adopted **GitOps** with **ArgoCD**, standardizing and simplifying how applications and configuration are deployed to EKS clusters.
- Provisioned and maintained scalable AWS infrastructure as code with **Terraform** and **CloudFormation**.
- Enforced **least-privilege IAM** policies, **AWS Secrets Manager** and vulnerability scanning in CI/CD, reducing security risk in releases.
- Set up **Grafana** and **CloudWatch** dashboards for logging, monitoring and alerting on infrastructure and applications, helping the team resolve production tickets faster.
- Administered **Linux (Ubuntu)** systems with shell scripting, package management, process monitoring and troubleshooting to maintain high availability in a fast-paced production environment.

PROJECTS

Button Roulette: End-to-End CI/CD to Amazon EKS | github.com/dikshaingole/button-roulette

Jenkins | Terraform | Amazon EKS | Helm | AWS ALB | IRSA | Docker | Spring Boot | React

- Built a **Jenkins** pipeline that builds a React frontend and Spring Boot API in parallel, publishes Docker images and deploys to **Amazon EKS** behind an AWS Application Load Balancer.
- Provisioned the VPC and EKS cluster with **Terraform**, backed by an encrypted, versioned S3 remote state with DynamoDB locking, and used **IRSA** to give pods least-privilege AWS access without static keys.
- Designed **change controls** into the pipeline: manual approval gates before every Terraform apply and production deploy, and a guarded teardown that requires typed confirmation and cleans up load balancers to avoid orphaned cloud cost.

CERTIFICATIONS

- AWS Certified Cloud Practitioner (Feb 2026, valid till Feb 2029)
- Infosys Certified AWS DevOps Professional (Infosys internal, Jan 2026)
- Infosys Certified AWS Administrator (Infosys internal, Apr 2026)
- Infosys Certified Azure DevOps Professional (Infosys internal)

EDUCATION

Bachelor of Engineering (B.E.) | Sant Gadge Baba Amravati University | 2016 – 2019
